Science Engineering with Specialization in Data Science

PROJECTS

KidLink (Parental Control & Child Monitoring)

A Mobile application designed to reduce excessive screen time by using screen time limits. Improve parental awareness and control on their kids digital wellbeing. This application is built using Flutter for UI and backend, Firebase cloud for Database and messaging(notification).

User Registration System (Go + Gin + PostgreSQL)

Developed an MVC Structured registration API with robust server-side validation and error handling. Tested APIs using Postman and managed Database schema with pgadmin4. Focused on scalability and a clean architecture.

Job Portal

Designed and developed a job posting application portal with CRUD based architecture. Built frontend with React and backend using Node.js + Express, structured with handler-based backend for maintainability. Integrated MongoDB for job and user data management.

Crypto Price Dashboard (Go + REST APIs + PostgreSQL)

Built a live crypto price tracker integrating with 3 exchanges (CoinDCX, ZebPay and CoinSwitch) using public APIs. Implemented a 5-seconds real time updates with dashboard visualization and database storage for historical analysis. Highlighted best/worst prices dynamically to assist quick decision-making.

SKILLS

Languages: Python, Go, JavaScript, HTML/CSS

Frameworks/Libraries: Express, React, Node, Gin, Gorm

Tools: MS Office, Jira, Git(CI/CD)

Platforms: VS Code, Flutter, MongoDB Atlas, Postgre, GitHub

Soft Skills: Rapport Building, People Management, Excellent Communication

CERTIFICATIONS

- Data Visualization with R by IBM
- Introduction to DevOps by IBM
- Social Psychology (with Honors) Wesleyan University
